COURSE BROCHURE

API Testing with Postman - Practical Foundations

Diploma, Vocational & Skills / Software Testing & QA

One-time full-course fee

INR 1,499

Access

12 months course access

Study plan

24 suggested study hours; 12 months access

Learning format

6 self-paced written English lessons with original explanations, worked examples, answered exercises and a self-assessed capstone. Includes a protected downloadable local QA practice kit. Existing automated Course Tutor assistance is available in the LMS.

Programme overview

Six original lessons cover HTTP contracts, a copyable local Python quotation API, response assertions, variables and synthetic authentication, typed data-driven runs, workflow/retry design and a fifteen-scenario portfolio. Stateful booking and concurrency work is explicitly a paper design, not an implemented backend. 6 self-paced written English lessons with original explanations, worked examples, answered exercises and a self-assessed capstone. Includes a protected downloadable local QA practice kit. Existing automated Course Tutor assistance is available in the LMS. Independent ZELVU practical study. No live instructor classes, recorded lecture series, individual human grading, job placement, external certification, ISTQB accreditation or examination voucher is included. Use only supplied local or explicitly authorised lab targets and fictional data. Tool installation and any required device/emulator are the learner's responsibility; paid cloud services and AI APIs are not required for the supplied exercises. These readings are also included in the separately offered Software QA and SDET Learning Path; compare its published syllabus before buying both. The small quotation contract is reused for Java API practice in the REST Assured course.

Who this is for

1. Basic testing and JSON familiarity; a computer with Python and a local Postman application or supported local agent. No paid cloud feature, production API or real credential is required.
2. Use fictional data and local or explicitly authorised test systems.

Published topics and learning focus

1. Understanding an HTTP Contract and Running a Local API
2. Writing Assertions that Test the Actual Response
3. Managing Variables, Authentication Conditions and Secret Boundaries
4. Building a Data-Driven Collection without Weakening the Oracle
5. Testing Workflow Contracts, Retries and Error Meaning
6. Capstone: A Reproducible Local API Test Portfolio

Before you choose

1. These are published programme highlights, not certification of complete syllabus coverage. Review the available reading index and programme trial before enrolling.
2. ZELVU provides learning support. It does not award the underlying degree, professional registration or an examination result.
3. Current checkout terms and refund policy apply. Payment and access require successful provider verification.
