COURSE BROCHURE

CNC Maintenance & Troubleshooting Foundations

Diploma, Vocational & Skills / CNC & Precision Manufacturing

One-time full-course fee

INR 2,499

Access

12 months course access

Study plan

14-20 suggested study hours; 12 months access

Learning format

Eight self-paced written lessons in English, original worked examples, paper or digital exercises, explained knowledge checks and a capstone with a model solution and self-assessment rubric. Automated Course Tutor support is available in the LMS.

Programme overview

Self-paced written foundation teaching with automated Course Tutor and document-based maintenance, condition-data, fault-triage and reliability exercises. No machine access, service tools, paid software, live supervision, repairs, electrical work, accreditation or maintenance authorisation included. Physical service requires separately qualified authorised personnel and exact manufacturer/site procedures. Eight self-paced written lessons in English, original worked examples, paper or digital exercises, explained knowledge checks and a capstone with a model solution and self-assessment rubric. Automated Course Tutor support is available in the LMS. Online theory and planning only. Physical machine practice requires separate qualified supervision and machine-specific authorisation. No machine time, software or simulator licence, live instructor, recorded lecture series, individual human marking, employment guarantee, ITI/DGT/NSQF qualification or manufacturer accreditation is included. Programme examples are for offline interpretation or simulation and are not ready-to-run machine instructions. Operator-level theory and fault triage only. Does not teach or authorise electrical, mechanical or safety-system servicing.

Who this is for

1. Basic CNC machine and manufacturing-process awareness.
2. Use the supplied fictional parts and data. Do not upload confidential employer drawings. Use only software you are entitled to use; paper alternatives are available.

Published topics and learning focus

1. Start here: machine systems and maintenance roles
2. Safe observation, energy awareness and escalation
3. Preventive, condition-based and corrective maintenance
4. Lubrication and coolant: interpreting records
5. Alarm history, hypotheses and structured diagnosis
6. Dimensional drift, surface finish and machine condition
7. Reliability metrics, downtime and closing evidence
8. Capstone: maintenance plan and fault-handover dossier

Before you choose

1. These are published programme highlights, not certification of complete syllabus coverage. Review the available reading index and programme trial before enrolling.
2. ZELVU provides learning support. It does not award the underlying degree, professional registration or an examination result.
3. Current checkout terms and refund policy apply. Payment and access require successful provider verification.
