COURSE BROCHURE

CNC Turning & Lathe Programming

Diploma, Vocational & Skills / CNC & Precision Manufacturing

One-time full-course fee

INR 3,499

Access

12 months course access

Study plan

18-24 suggested study hours; 12 months access

Learning format

Eight self-paced written lessons in English, original worked examples, paper or digital exercises, explained knowledge checks and a capstone with a model solution and self-assessment rubric. Automated Course Tutor support is available in the LMS.

Programme overview

Eight substantive written lessons covering two-axis turning interpretation, process planning, speed/feed calculations, profile geometry, cycles and an assessed paper/simulation capstone. Theory and offline study only; no machine operation, workshop, live class, software licence, human marking or manufacturer accreditation included. Eight self-paced written lessons in English, original worked examples, paper or digital exercises, explained knowledge checks and a capstone with a model solution and self-assessment rubric. Automated Course Tutor support is available in the LMS. Online theory and planning only. Physical machine practice requires separate qualified supervision and machine-specific authorisation. No machine time, software or simulator licence, live instructor, recorded lecture series, individual human marking, employment guarantee, ITI/DGT/NSQF qualification or manufacturer accreditation is included. Programme examples are for offline interpretation or simulation and are not ready-to-run machine instructions. Builds on CNC fundamentals and overlaps the modal-state topics in Programme Debugging. This course concentrates on turning.

Who this is for

1. CNC fundamentals, basic drawing interpretation and coordinate arithmetic.
2. Use the supplied fictional parts and data. Do not upload confidential employer drawings. Use only software you are entitled to use; paper alternatives are available.

Published topics and learning focus

1. Turning coordinates, diameter mode and safe study boundaries
2. Drawing, stock, datums and inspection planning
3. Spindle modes, feed units and cutting-time calculations
4. Straight moves, shoulders, tapers and profile interpretation
5. Roughing-cycle review and finishing allowances
6. Bores, grooves and thread-planning foundations
7. Offline verification and fault investigation
8. Capstone: stepped-spacer turning-study dossier

Before you choose

1. These are published programme highlights, not certification of complete syllabus coverage. Review the available reading index and programme trial before enrolling.
2. ZELVU provides learning support. It does not award the underlying degree, professional registration or an examination result.
3. Current checkout terms and refund policy apply. Payment and access require successful provider verification.
