COURSE BROCHURE

PLC Programming Foundations

Diploma, Vocational & Skills / Industrial Automation, PLC & SCADA

One-time full-course fee

INR 3,999

Access

12 months course access

Study plan

16 suggested study hours; 12 months access

Learning format

4 self-paced written English lessons with original worked examples, disconnected simulation or paper exercises, explained knowledge checks and a self-assessed capstone. Optional automated Course Tutor assistance is available in the protected LMS.

Programme overview

Four original written lessons covering signal contracts, Boolean decisions, cyclic execution models, project testing and a fictional sorting-cell capstone. Practice uses paper, spreadsheets or optional local simulation; no physical-machine commissioning is included. 4 self-paced written English lessons with original worked examples, disconnected simulation or paper exercises, explained knowledge checks and a self-assessed capstone. Optional automated Course Tutor assistance is available in the protected LMS. AI-authored with independent AI editorial checks; independent human academic review is not included. Independent ZELVU vocational study using fictional exercises. No vendor affiliation, OEM certification, engineering software licence, PLC or HMI hardware, supervised physical laboratory, live human instruction, individual human marking, recorded video lecture series or placement guarantee is included. Simulation results do not establish physical equipment competence. Ordinary PLC logic is not a safety-rated emergency-stop system. Real wiring, energisation and commissioning require qualified supervision, equipment-specific procedures and authorised isolation; do not connect these training exercises to a live plant. Included in PLC & Industrial Automation Complete Course; do not purchase both for these same lessons. The complete course has its own lesson placements and does not grant separate focused-course entitlements. Introductory PLC topics may overlap with the separately sold Robotics & Automation degree-support course; its existing material and access are separate.

Who this is for

1. Basic arithmetic and English reading. No prior PLC programming is required; all essential practice inputs are supplied and no hardware purchase is necessary.
2. Use only the supplied fictional data and disconnected training environment. Keep real plant credentials, network addresses, private programs and customer information out of the Course Tutor.

Published topics and learning focus

1. Signals, Scan Models and Remembered State
2. Boolean Logic and an Unambiguous I/O Contract
3. Project Structure, Simulation and Reproducible Testing
4. Capstone: Specify and Verify a Fictional Sorting Cell

Before you choose

1. These are published programme highlights, not certification of complete syllabus coverage. Review the available reading index and programme trial before enrolling.
2. ZELVU provides learning support. It does not award the underlying degree, professional registration or an examination result.
3. Current checkout terms and refund policy apply. Payment and access require successful provider verification.
